

Food

HOW ECONOMIC CHOICES AFFECT INDIVIDUALS, COMMUNITIES AND THE ENVIRONMENT – YEAR 4

**Preparing to become a
responsible future citizen**

STICKY KNOWLEDGE

Food choices have a big effect on the environment. Meat from animals (cows, goats, sheep) has a large carbon footprint due to the methane (a potent global warming gas) released from digestion and manure.

Fewer toxic chemicals reduce global warming emissions and protect our oceans.

Fishing fleets depend on dirty fossil fuels and emit high levels of CO₂ every year.
